

CONTENTS

CONTENTS	3
INTRODUCTION	11
Lecture I. THE BOLTZMANN THEORY	14
§ 1. The Boltzmann equation	16
P r o b l e m 1. Molecule collision number	20
§ 2. The Boltzmann H-theorem	21
§ 3. Conservation laws	25
P r o b l e m 2. Locally equilibrium distributions	26
§ 4. The τ-approximation	27
P r o b l e m 3. The thermal conductivity in the τ -approximation.	28
P r o b l e m 4. The coefficient of viscosity in the τ -approximation.	30
§ 5. An approximate solution of the Boltzmann equation	31
§ 5.1. The thermal conductivity	35
§ 5.2. Coefficients of viscosity	37
§ 6. The Boltzmann equation for a binary mixture	41
§ 7. The Chapman–Enskog equation for a binary mixture	43
§ 7.1. The system of algebraic equations	47
§ 7.2. Diffusion and thermal diffusion	51
§ 7.3. The thermal conductivity of a gas mixture	53
§ 7.4. The transversal viscosity of a gas mixture	55
P r o b l e m 5. The diffusion coefficient	56
P r o b l e m 6. The thermal diffusion coefficient	59
A p p e n d i x. The Bogolubov dynamical theory	62
References	66
Lecture II. HYDRODYNAMIC EQUATIONS	67
§ 1. General relations	68
§ 1.1. Mass conservation law	68

§ 1.2. Momentum conservation law	69
§ 1.3. Energy conservation law	70
§ 2. The closed system of equations	72
§ 3. Linearized hydrodynamic equations	75
§ 4. Hydrodynamic excitations	77
§ 5. Excitations in a charged system	79
§ 6. Meteorologist's equations	80
References	82

Lecture III. **THE ENSKOG THEORY**

§ 1. The Enskog equation	84
§ 2. Conservation laws	88
§ 3. Linearization of the collision integral	91
§ 4. The equations of hydrodynamics	95
§ 5. Solution of the transport equation	96
§ 6. Calculation of the transport coefficients	97
§ 6.1. transport corrections	97
§ 6.2. Corrections caused by momentum transfer	99
§ 6.3. The shear and volume viscosity factors	101
§ 6.4. Corrections caused by energy transfer	102
§ 6.5. The thermal conductivity	104
§ 7. Conclusions	104
Appendix. Calculation of angular integrals	105
References	110

Lecture IV. **TRANSPORT EQUATIONS**

FOR CHARGED PARTICLES	111
§ 1. Small momentum transfer	112
§ 2. Landau's collision integral	114
P r o b l e m 1. Transport coefficients	
in the τ -approximation	119
P r o b l e m 2. The cooling rate of hot electrons	122
§ 3 The H theorem for Landau's collision integral	124
§ 4. The Fokker–Planck collision integral	126
§ 4.1. The Fokker–Planck equation for charged particles	127

§ 4.2. The Fokker–Planck equation for heavy particles	130
P r o b l e m 3. The mobility of heavy particles	131
P r o b l e m 4. The diffusion and thermodiffusion coefficients	132
References	134

Lecture V. **ELECTRONS IN A METAL** ($T \ll \Theta$)..... 135

§ 1. The equation for the distribution function	136
P r o b l e m 1. The residual resistance	141
P r o b l e m 2. The electron thermal conductivity.....	142
P r o b l e m 3. The thermoelectric effect	143
P r o b l e m 4. The law of increasing entropy	144
§ 2. The Kondo effect	146
§ 2.1. The perturbation theory	146
§ 2.2. The temperature correction	153
§ 2.3. Reducing to a one-dimensional problem	156
§ 3. Non-stationary phenomena	157
§ 3.1. Longitudinal fields	157
§ 3.2. Transversal fields	161
References	166

Lecture VI. **ELECTRONS AND PHONONS IN A METAL**..... 167

§ 1. The electron–phonon interaction	168
§ 2. The transport equation in metals	170
§ 2.1. The H -theorem on entropy increase	171
§ 3. The transport equation at equilibrium phonons ...	174
§ 3.1. Integration over virtual electron momenta	180
§ 3.2. Integration over scattering angles	180
§ 3.3. A trial function of the first approximation	181
§ 3.4. The Bloch–Grüneisen equation	182
§ 4. The resistance in dependence of temperature	183
§ 5. The thermal conductivity in dependence of temperature	186
§ 5.1. Low temperatures $T \ll \Theta$	186
§ 5.2. The kernel of the integral equation	190

§ 5.3. High temperatures $T \gg \Theta$ 191
 P r o b l e m 1. Qualitative considerations 192
 P r o b l e m 2. The rate of phonon relaxation 195
 P r o b l e m 3. The rate of electron relaxation 196
 § 6. **The conductivity of semiconductors** 198
 § 7. **Umpklapp processes and their role** 200
References 205

Lecture VII. **NON-STATIONARY PERTURBATION**

THEORY 206
 § 1. **The Schwinger–Mills–Keldysh theory** 207
 § 1.1. The transition to the interaction representation 208
 § 1.2. Averaging over the states of an ideal gas 209
 § 1.3. The diagrammatic technique 212
 § 2. **Tunneling through a flat interface** 214
 § 3. **The Kubo formula** 217
 § 4. **A longitudinal external field** 219
 § 4.1. The longitudinal non-stationary correction 220
 § 4.2. The longitudinal dielectric permittivity 222
 § 5. **A transversal external field** 224
 § 5.1. The transversal non-stationary correction 226
 § 5.2. The transversal dielectric permittivity 226
 § 5.3. The calculation of the penetration depth 231
 § 6. **The rate of relaxation of impurity spins** 232
References 237

Lecture VIII. **THE TUNNELING CURRENT AND**

THE JOSEPHSON EFFECT 238
 § 1. **Tunneling at a given voltage applied** 239
 § 1.1. The tunneling Hamiltonian and average current 239
 § 1.2. The $(u-v)$ transformation with a phase factor 241
 § 1.3. The calculation of the volt ampere characteristic 243
 § 2. **The stationary (d.c.) supercurrent** 249
 § 2.1. The calculation of the Josephson current amplitude 250
 § 3. **The non-stationary Josephson effect** 256

§ 3.1. The Josephson current. The temperature $T \ll T_c$	258
§ 3.2. The interference current. The temperature $T \ll T_c$	262
§ 4. Conclusion	264
Appendix The calculation of elliptic integrals	266
References	270

Lecture IX. **QUANTUM TRANSPORT**

PHENOMENA	271
§ 1. The equation for the density matrix	272
§ 2. The quantum transport equation	277
§ 3. The Dyson equation	280
§ 4. Collision integrals	285
§ 4.1. The scattering by impurities	288
§ 4.2. The scattering by equilibrium phonons	289
§ 4.3. The electron–electron interaction	292
§ 4.4. The Landau collision integral	295
§ 5. The screening and plarization	298
§ 5.1. The plasmon exchange	305
§ 6. The retarded and advanced Green functions	305
§ 7. Diffusons and Cooperons	310
§ 7.1. "Long tails" of correlation functions	319
References	321

Lecture X. **NOISE IN ELECTRICAL CIRCUITS** ... 322

§ 1. The fluctuation-dissipation theorem	324
§ 1.1. The Kubo formula	325
§ 1.2. The white noise	326
§ 2. The 1/f-noise in electrical circuits	330
§ 2.1. The 1/f-noise. Description of phenomenon	330
§ 2.2. The 1/f-noise. The setting of problem	330
§ 3. The equations at $T = 0$	331
§ 3.1. The equation for four-current correlator	333
§ 3.2. Equations for two-current vertices	336
§ 3.3. Equations for scalar vertices	339
§ 3.4. Calculation of the exponent α	342

§ 4. The $1/f^\alpha$-noise at a finite temperature	343
§ 4.1. Experimental data	343
§ 4.2. Scheme of calculations	344
§ 4.3. Formulation of problem	347
§ 5. Renormalization-group equations	351
§ 5.1. Equations for scalar vertices	351
§ 5.2. Equations for two-current vertices	354
§ 5.3. Equations for four-current vertices	356
§ 6. Calculation of the exponent α	357
§ 7. Calculation of φ values	360
§ 7.1. Low temperatures ($T \ll \Theta$)	362
§ 7.2. High temperatures ($T \gg \Theta$)	363
§ 7.3. Qualitative comparisons with experiment	364
§ 7.4. Conclusions	365
References	366

Lecture XI. TRANSPORT EQUATION FOR

PHONONS	367
§ 1. The transport equation	368
§ 2. The phonon-phonon interaction	368
§ 3. The three-phonon collision integral	370
§ 4. The H-theorem	373
§ 5. The thermal conductivity of dielectrics	377
§ 5.1. The equation at a given temperature gradient	377
§ 5.2. The thermal conductivity at high temperatures	379
§ 5.3. The thermal conductivity at low temperatures	380
§ 6. The phonon hydrodynamics equations	384
§ 7. Sound absorbtion. Short waves	387
§ 8. Sound absorbtion. Long waves	392
§ 8.1. Long waves. High temperatures $T \gg \Theta$	395
§ 8.2. Long waves. Low temperatures $T \ll \Theta$	396
P r o b l e m. Sound absorbtion in the τ approximation	397
References	402

Lecture XII. **TRANSPORT PHENOMENA IN**

FERMI-LIQUID.....403

§ 1. **The equation for the distribution function**404

§ 2. **The relaxation time in dependence of temperature**406

§ 3. **The conservation laws**407

§ 3.1. The continuity equation for quasi-particles407

§ 3.2. The momentum conservation law408

§ 3.3. The energy conservation law409

§ 4. **Linearization of the transport equation**410

Problem 1. The thermal conductivity in dependence of temperature412

Problem 2. The viscosity in dependence of temperature415

Problem 3. Electron's entrainment417

§ 5. **The exact solution of the transport equation**418

§ 5.1 **Separation of variables**418

§ 5.2 **Transformation of the kernel of the integral equation**418

§ 6. **Solution of integral equations**425

§ 6.1. The inhomogeneous equation. Even functions426

§ 6.2. The inhomogeneous equation. Odd functions429

§ 7. **The shear viscosity. The exact solution.**431

§ 8. **The thermal conductivity. The exact solution**434

§ 9. **The second viscosity**436

§ 10. **The sound propagation in a Fermi-liquid**438

§ 10.1. The zero sound in a Fermi-liquid438

§ 10.2. The velocity of hydrodynamic sound438

§ 10.3. The sound absorption in the τ -approximation441

§ 11. **The H -theorem**451

Appendix A. The effective mass455

Appendix B. Calculation of integrals457

Appendix C. Calculation of angular integrals460

References462

Lecture XIII. **TRANSPORT PHENOMENA IN SUPERCONDUCTORS** 463

§ 1. **The non-stationary Meissner effect** 464

§ 1.1. The Pippard case 472

§ 1.2. The London case 477

§ 2. **The absorbtion of ultrasound** 480

§ 3. **The rate of relaxation of the nuclear spins** 485

§ 4. **The thermal conductivity of a superconductor** 489

§ 5. **The Ginzburg–Landau non-stationary equations** 495

P r o b l e m 1: The gauge invariant GLAG equation 501

P r o b l e m 2: Relaxation in an ideal superconductor 502

P r o b l e m 3: Relaxation in a non-ideal superconductor 503
